

MEGATRON MR - FIRMWARE UPDATE

To upgrade the firmware on your MR, copy the updated software version to a USB drive. With the controller powered up, plug the USB drive into the MR USB port on the back of the display panel.

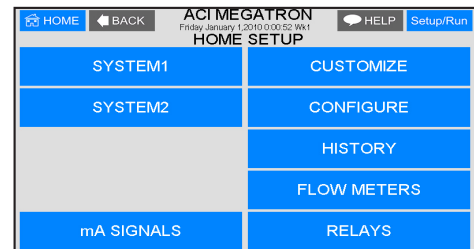

The USB DRIVE DETECTED pop-up window will appear. If a password is in the unit, the USB will ask for it.

Select --> **Update Firmware** by using the Arrow buttons. Then press ENTER.

Warning: Do not remove power or USB during updating. It may take a few minutes to complete. Once the update is complete remove USB.

From here push **SYS INFO** and confirm that the unit now has the new version.
